What is your Domain of Idea?	Diabetes Intellect (Domain:- HealthCare)
Explain your Problem Statement– (Make sure to be precise & to the point)	There is a huge lot of people suffering from diabetes in the entire world. therefore better management of blood glucose level is required.Generally patient visit doctor periodically in the duration of 3 months or on SOS Basis therefore they must have have better management of glucose level in this span .There is a need of something that could help patient every time and every where in this span of 3 months.
Explain your Resolve –	(A IOT Based Product and Service(app)) to Help diabetic patients to monitor blood glucose level (from product) in a smarter way by keeping all the previous test records saved in the app and analysing them so that it will plan a personalised exercise and diet routine. Even we can track fitness routine to motivate user for workout. helping user to learn about diabetes as it can be managed easily with diet and exercise and not totally relying on medicines .
